Rinses were repeated with ethanol 95% and ethanol/acetic acid until the desired tinting intensity was obtained. Zrinzo, L., Zrinzo, L. The organisational complexity of the brain stem is based, at least in part, on the fact that it hosts a multitude of ascending and descending strands of fibers that flow between a large number of nuclei whose exact boundaries are still disputed. (F) Coronary view of the severed brain. In front. This brain comes from a generous donation from a 61-year-old woman who died of multi-metastatic colorectal cancer with no signs of neurological, neurodegenerative or psychiatric diseases. The roof plate of the middle brain is represented by the roof or quadrigeminal plate, which consists of the upper and lower collicles. SS, AP and MP were in charge of the segmentation of the nuclei of the brain stem and the fiber tracts. Therefore, readers should pay close attention to the individual scale bars when making comparisons between plates. New York, NY: Raven Press. The immunocompromised sections were mounted on gelatin-coated slides, dehydrated in ethanol and covered with Permount. The nomenclature and abbreviations used in this study are largely based on those of Paxinos and Watson (1982). The brain stem was dissected and cut along a sagittal plane 1 mm from the midline (Figure 1G). F., Kalani, M. Patients/participants gave their written informed consent to participate in this study. (1967). After three washings in PBS, the sections were placed for 20 min at room temperature in hydrogen peroxide (3% H2O2 diluted in ethanol) to remove endogenous peroxidase activity. (2016), S., and Haacke, E. (1982). Stereotactic localization of the human pedunculopontine nucleus: coordinates based on atlases and validation of a magnetic resonance protocol for localization (1903). For example, the abbreviation Sp5 for spinal trigeminal nucleus, as described in this atlas, includes the oral (Sp5O), interpolar (Sp5I), and caudal (Sp5C) parts of the nucleus, and the abbreviation VC for ventral cochlear nucleus includes the anterior (VCA) and posterior (VCP) parts of the nucleus that are delineated in other atlases. However, despite its primary importance in the coordination % several basic activities of the central nervous system, the brain stem is one of the least understood parts of the human brain.
